

Joachim Fischer

Director
econ industries GmbH
Starnberg, Germany

Joachim Fischer is the director for business development of econ industries GmbH, a German based company that offers solutions for the treatment of hazardous industrial waste, such as contaminated soils, drill cuttings, spent catalyst, spent active carbon, sludge, filter-cakes, etc.

Namely the company's proprietary VacuDry® technology, using heat and vacuum to separate the hazardous contaminants like mercury, pesticides, PCB, PAH, organic lead compounds, as well as almost all other evaporable hydrocarbons.

It is the worldwide leading solution to recover resources from industrial wastes.

Profile

20 years of management experience

Existing network of C-level decision makers

International expertise

Joachim Fischer is responsible for projects mainly in the field of mercury-contaminated soil (mainly caused by the chlorine production) and for treatment of hazardous wastes in the oil & gas industries. Actually, he works on projects in the Middle East, Azerbaijan, Ukraine, USA, Canada and Mexico.

Education

Technical University Munich, Electrical Engineering
